

# FIREFIGHTER LOCKERS

## MSS

Description

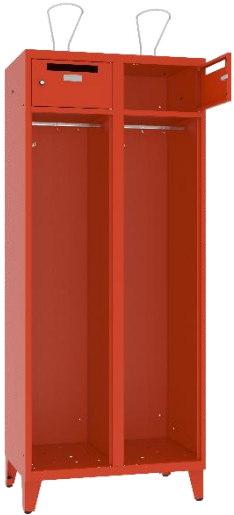

The MSS firefighter locker is an essential piece of equipment for any fire station, designed to provide quick and convenient access to clothing and firefighting gear. Its well-thought-out construction ensures order and organisation – multiple hooks, a clothes rail, and a dedicated helmet holder allow for practical storage of equipment. A lockable compartment with a drop-in slot enables the rapid deposit of valuable items without the need to open the door.

Thanks to its solid construction and durable materials, the MSS locker is perfectly suited for demanding conditions. The perforated bottom panel helps maintain cleanliness, while the welded structure eliminates the need for assembly. This is a solution designed with comfort and reliability in mind – something you can count on every day. **MSS – because every second counts.**

### FEATURES

MSS

- 10-year warranty (according to Malow product warranty terms).
- Designed for storing firefighter clothing and operational equipment.
- Made of 0.8 mm thick sheet metal.
- Removable, galvanised helmet holder mounted on the top panel of the locker (height: 214 mm).
- Equipped with a lockable compartment with a drop-in slot located in the upper part of the main chamber. Each lock comes with two keys as standard.
- Fitted with a metal clothes rail and two metal hooks inside the compartment.
- Includes a perforated strip with two sturdy, adjustable hooks for firefighter gear.
- Made of cold-rolled steel sheet. Protected with zirconium conversion coating and finished with powder paint.
- Features a perforated bottom panel coated with zinc.
- Welded structure additionally reinforced with welds to ensure extra strength and rigidity.
